Amendment to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

- 1. (Currently Amended) Process for preparing homopolymers, copolymers and block copolymers of one or more 1-olefins, comprising adding one or more monomer in succession in the presence of transition metal compounds having a fluorenyl ligand, at least one further ligand and at least one donor-acceptor interaction between the ligands or reaction products of these transition metal compounds and a cocatalyst(s), wherein the process is carried out in the temperature range from -40° to +15°C_s-and
- (Original) The process according to Claim 1, wherein the at least one further ligand is a cyclopentadienyl ligand or a substituted cyclopentadienyl ligand.
- (Original) The process according to Claim 1, wherein the block copolymer(s) are based on one or more polar or nonpolar monomers.
- 4. (Original) The process according to Claim 1, wherein the homopolymer(s) and copolymer(s) has a polydispersity M_w/M_n in the range from 1 to 2.
- 5. (Original) A process for preparing 2-block copoylmers comprising the process of Claim 1.
- 6. (Original) A process for preparing 3-block copoylmers comprising the process of Claim 1.
- 7. (Original) The process according to Claim 1 further comprising adding a termination reagent(3), wherein the homopolymer(s), copolymer(s) or block copolymer(s) is end-functionalized.

PO-7800

- 8. (Original) A process for preparing polymers having bimodal molar mass distributions according to Claim 1, further comprising the presence of a second transition metal compound with or without a donor-acceptor interaction, wherein the difference between the two molar masses is able to be varied by the length of the reaction.
- (Original) An elasticized, high-impact thermoplastic comprising a block copolymer prepared according to Claim 1.
- 10. (Original) A rubber having high green strength comprising a block copolymer prepared according to Claim 1.
- 11. (Original) A thermoplastic elastomers (TPEs) having a melting point greater than +60°C and a glass transition temperature of less than +10°C comprising a block copolymer prepared according to Claim 1.
- 12. (Original) A thermoplastic elastomers (TPEs) having a melting point greater than +60°C and a glass transition temperature of less than +10°C comprising a 3-block copolymer prepared according to Claim 1.
- (Original) A homopolymer prepared according to the process according to Claim 1.
- (Original) A copolymer prepared according to the process according to Claim 1.
- 15. (Original) A block copolymer prepared according to the process according to Claim 1.
- 16. (Original) A polymer blend comprising the homopolymer, copolymer or block copolymer prepared according to Claim 1.
